PROJECT PROFILE

The Ryan Creek Interceptor was an improvement program designed to provide sanitary sewer service for the ultimate build-out of the service areas. Super Excavators, Inc. constructed 2,404 linear feet of 48" RCP via microtunneling. We also constructed 5,042 linear feet of 36", 1,283 linear feet of 42" and 1,319 linear feet of 48" pipe at an average depth of 32 vertical feet using open cut methods. Stacked shields were used to maintain trench, and excavate below subgrade in unstable soils.
